

Diamond Report

No.	15020010
Date	09 February 2015
Weight	0.73 ct
Shape	pear-shape
Cut	brilliant cut
Measurements	7.60 x 5.06 x 3.12 mm
Depth	61.7 %
Table	65 %
Girdle	thin to very thick, faceted
Culet	none
Polish	very good
Symmetry	good
Clarity Grade	VS 1
Colour Grade	E
Fluorescence	none
Diamond Type	la
Comments	"GIA 2145121200" is inscribed on the girdle. Important notes and limitations on the reverse.

Annette Widemann-Wong

Pierre Hardy

Information Sheet: Diamond type

to Report No. 15020010

Diamonds are classified into two fundamental groups based on the relative presence or absence of nitrogen incorporated into the crystal structure, as determined by the infrared spectrum. Type I diamonds contain appreciable concentrations of nitrogen, whereas type II diamonds are chemically very pure and do not reveal infrared absorption characteristics related to nitrogen.

A further separation of these two groups includes type Ia (nitrogen atoms present in pairs or groups), type Ib (isolated nitrogen atoms), type IIa (no measurable traces of nitrogen) and type IIb (traces of boron).

Information Sheets are intended to provide information supplementary to the contents of the Report and comment on, for instance, the type of gemstone, the geographic origin and the presence or absence of treatments. By definition, Information Sheets are purely informative in nature: they consist of a standard text and are issued for all types of stones of that particular category. Information Sheets, therefore, do not imply a certain quality or rarity of the stone described in the Gübelin Gem Lab Report which it is attached to.
